DANIEL PINO

Software Engineer · Android & Full-Stack · Kotlin, TypeScript, Python

Homestead, FL | 786-926-0720 | pinoponedaniel@gmail.com | github.com/Daniel-Pino-2000 | linkedin.com/in/daniel-pino-dev | Portfolio

SUMMARY

Software engineer and Magna Cum Laude CS graduate (FIU, 3.8 GPA) who ships complete products: an Android app in Google Play testing with its own backend and AI assistant, full-stack web apps, and a desktop search engine, with 600+ automated tests across them.

TECHNICAL SKILLS

Languages: Kotlin, TypeScript, JavaScript, Python, Java, SQL, C, C++ | Spoken: English and Spanish (fluent)
Mobile: Android SDK, Jetpack Compose, MVVM, Coroutines & Flow, Room/SQLite, WorkManager, Firebase, Google Play publishing
Backend & Web: Ktor, FastAPI, Node.js/Express, React, Tailwind CSS, PostgreSQL, MySQL, SQLAlchemy, REST APIs, JWT/OAuth2
AI & LLMs: LLM APIs (Cloudflare Workers AI, OpenAI-compatible), prompt engineering, LLM evaluation, Claude Code
DevOps & Testing: Git, GitHub Actions, Docker, Render, Vercel, JUnit, pytest, detekt, Gradle

PROJECTS

TreasuredWord | *Kotlin, Jetpack Compose, Ktor, PostgreSQL, Cloudflare Workers AI* GitHub

- Released an offline-first Android Bible app through v1.7 on Google Play closed testing (Android 7–16, 10 languages), with translation downloads, search, a home-screen widget, and shareable verse images.
- Designed and deployed its own Ktor + PostgreSQL backend (Docker on Render) with secure sign-in (JWT, Google Sign-In, email verification) and background sync that keeps highlights and notes in step across devices.
- Integrated an AI "Bible Helper" on Cloudflare Workers AI with tested prompts, daily usage limits, and safety handling, running at $0/month; 500+ unit tests and CI cover the app and server.
- **In progress:** streaming AI answers, search by meaning (embeddings + pgvector), and the Google Play production launch.

BiblioTech | *Python, FastAPI, SQLAlchemy, MySQL, React, TypeScript* GitHub

- Developed a full-stack bookstore: a FastAPI + MySQL REST API with auto-generated OpenAPI docs and a React 19 + TypeScript frontend, secured with JWT login and admin-only catalog management.
- Shipped search, ratings, comments, a cart, and wishlists, with Alembic migrations, 27 pytest tests, Docker Compose, and CI.

FastFinder | *Kotlin, Compose Desktop, Apache Lucene, JUnit 5* GitHub · Download

- Engineered a Windows desktop app for instant file search: multi-threaded indexing into Apache Lucene (~2x faster than single-threaded on 30K files) and search-as-you-type with filters and sorting.
- Made index rebuilds crash-safe with automatic rollback, added fast incremental updates from the NTFS change journal, and shipped an MSI installer with CI (70+ JUnit tests, detekt).

Tadu | *Kotlin, Jetpack Compose, Firebase, Room* GitHub

- Built an offline-first Android task manager in Kotlin and Jetpack Compose (MVVM + repository layer), storing tasks locally with Room and syncing them with Firebase Auth and Firestore.
- Added deadlines, priorities, labels, location tags, search, a calendar view, and AlarmManager reminders that survive reboots.

CodeHired | *TypeScript, Node.js, Express 5, React 19, SQLite* GitHub

- Building a US tech-jobs aggregator: an Express 5 + TypeScript REST API with validated search, filters, and pagination over SQLite, plus a responsive React 19 + Vite frontend.
- **In progress:** pulling jobs from 6 sources (Greenhouse, Lever, Ashby, Adzuna, USAJobs, JSearch) on a schedule, deduplication, full-text search, accounts, application tracking, and $0 deployment on Vercel + Turso.

EXPERIENCE

Programming Tutor Nov 2024 – Oct 2026

Miami Dade College | Homestead, FL

- Tutored 12+ students weekly, 1-on-1 and in groups, on coding fundamentals, data structures, algorithms, OOP, and debugging.
- Designed and led hands-on workshops turning abstract CS concepts into practical exercises, helping raise grades and engagement.

AI Trainer (Contract) Sep 2023 – Aug 2024

Remotask & DataAnnotation | Remote

- Debugged and rewrote AI-generated code across 500+ tasks; corrected solutions were used to fine-tune code-generation models.
- Compared model responses and wrote targeted prompts to probe reasoning, giving technical feedback used to improve output quality.

EDUCATION

Bachelor of Science in Computer Science Aug 2026

Florida International University | Miami, FL | Magna Cum Laude, GPA 3.8 | Dean's List, 6 consecutive terms

- Academic Achievement Award, Knight Foundation School of Computing & Information Sciences, FIU Tech Talent Academy (2026)
- Coursework: Data Structures, Databases, Operating Systems, Software Engineering, Blockchain Fundamentals
